

YINWEI ZHANG

✉ zhangyinwei1994@gmail.com · ☎ (+1) 520-486-7382 · in YINWEI · 🔗 <https://yinwei-zhang.github.io/>

👤 Summary

Ph.D. candidate in Industrial Engineering. Masters in Statistics. 1.5 years of industrial experience in developing/deploying deep learning models. Solid theoretical background in machine learning and statistical methods. Proficiency in Python, data science libraries, deep learning frameworks, and SQL. Self-motivated individual with excellent communication and presentation skills.

🎓 Education

University of Arizona, United States

Ph.D. Candidate in Industrial Engineering

Aug, 2018 - Present

Master of science in Statistics&Data Science

Aug, 2020 - Dec, 2022

Master of science in Engineering Management

Aug, 2016 - May, 2018

Jingchu University of Technology, China

Bachelor of science in Process Equipment and Control Engineering

Sep, 2012 - Jul, 2016

Related Coursework: Fundamental of Optimization, Experimental Design, Theory of Probability& Statistics, Statistical Machine Learning, Database Design in SQL, Project Management

⚙️ Technical Proficiencies

- **Soft skills:** collaboration, communication, writing, leadership, presentation, quick-learner, data visualization
- **Programming skills:** Python, R, Matlab, SQL
- **Frameworks:** TensorFlow, PyTorch, Lua, Scikit-Learn, SciPy, Numpy, Pandas, Git, Linux, Docker, MLflow, OpenCV
- **Awards/Certificates:** IEEM Honorable Mention Award, Roots2Resilience Scholarship, AWS Cloud Practitioner (on-going)

👥 Experiences

Research Scientist Intern, ABB Ltd (Fortune 500), Raleigh, NC

Jan, 2020 - Aug, 2021

Highlights: rotated among research groups, went through the life-cycle of deep learning algorithms using PyTorch and TensorFlow

- Developed the pipeline for data preprocessing, model training, testing, and deployment for **image based regression and segmentation** tasks in a **multi-GPU Linux server**. Tools include **TensorFlow/PyTorch**, **TensorFlow Serving**, and **Docker**
- **Fine-tuned** the neural networks with different data fusion mechanisms, learning rate schedulers, optimizers, and backbone layers. Monitored the training and testing processes in **TensorBoard** and prevented overfitting by **early stopping**
- Worked with cross-functional teams to **analyze errors** of the existing pipeline. **Optimized** algorithms for data collection, and **proposed new algorithms** for data augmentation and result interpretations. The overall performance was improved by **30%**
- Cooperated with the project managers in identifying the key **evaluation metrics**. **Visualized** and **presented** the results to the technical leaders. The final achievements include **3 patents** and **2 reports**

Research Assistant, University of Arizona, Tucson, AZ

Aug, 2018 - Present

Highlights: worked on time series analysis, image processing, and anomaly detection projects using machine learning

- Proposed an **unsupervised** method for image-based **anomaly detection** by incorporating **LASSO and Ridge** regularizations into the multivariate **regression model**. Designed a gradient-based optimization algorithm that can run parallelly for model estimation with a time complexity $O(n \log n)$. The F1 score on the testing dataset was improved by **15%**
- Developed a simulation pipeline in Docker for studying the failure of the perception system in the autonomous vehicle. Tools include **Python**, **C++**, **ROS**, **CARLA**, and **Autoware**. Considered the **temporal correlation** of the failure events and trained a parametric model by **EM algorithm** to predict future failures, improving the MAE by **40%**
- Proposed an **unsupervised object detection** method by LK optical flow, feature tracking, perspective transformation, and frame differencing using **OpenCV**. Boosted the results by postprocessing such as thresholding, connected component analysis, and morphological operations. The algorithm was transmitted to a Raspberry Pi mounted on an UAV for testing
- Made detailed plans for data collection with repeatable medical experiments. Reduced the data dimensionality and extracted the features of the collected temporal data by the functional **principal component analysis**. Selected the number of PC by the explained variance and clustered the PC scores via the **Gaussian mixture model**

📁 Projects

Burst Detection for Sensor System | RNN, GCP, Streamlit, TensorFlow

2022

- Trained a **Seq2Seq model** on the **time-series** sensor signals on **Google Colab** and uploaded it to **GCP Storage bucket**
- Applied **statistical process monitoring** algorithm on the residuals between the predicted and observed sensor values
- Deployed the model via **Google AI Platform** and served it **on demand** by building a website via **Streamlit**

Image-based Anomaly Segmentation | *autoencoder, PyTorch*

2022

- Trained an **autoencoder** using **structural similarity index measure** in **PyTorch** and construct a memory bank
- Identified the abnormal feature by the **cosine similarity score** and replaced it with the average of top-k similar normal features
- Segmented anomalies by applying thresholding to the residual of the raw and the decoded images, achieving 0.88 in F1 score

Credit Card Fraud Detection | *Sklearn, machine learning models, mlflow*

2021

- Built the pipeline for skewed data by integrating the preprocessing, SMOTE, the model, and the random/grid search in **Sklearn**
- Evaluated **logistic regression**, **random forest**, and **gradient boosting** by the precision and recall, and tracked via **MLflow**

Presentations

Patents

- System and method to generate augmented training data for neural network, No. PCT/US21/37798
- Robotic systems and methods used with installation of component parts
- Robotic systems and methods used to update training of a neural network based upon neural networks outputs

Others

President of INFORMS Student Chapter at the University of Arizona

- Wrote proposals and lead 4 members to hold social events, presentations, and recruiting events for graduate students

Teaching assistant for SIE 506, Quality Engineering

- Assisted students in understanding process monitoring methods such as hypothesis testing, CUSUM, and EWMA

Teaching assistant for SIE 533, Fundamentals of Data Science for Engineers

- Demonstrated the logistic regression, boosting, and decision tree using Python, Numpy, Pandas, and Scikit-learn

Organizer, the 1st CVPR Data Challenge on Vision-based Industrial Inspection, Vancouver Jan, 2023 - Present

- Collaborated with team members to prepare dataset, baseline object detection methods, evaluation pipeline, and workshop promotion. Tools include Roboflow, Python, PyTorch, and Google Colab
